

Optimizing Mazda of Claremont's Digital Marketing Strategy with VIN IQ

The Challenge

When Ram Tehrani stepped into the role of General Manager at Mazda of Claremont, he was concerned with the lack of transparency of marketing performance. It became challenging to identify which campaigns and vendors were truly beneficial to the dealership's success. This issue is part of a broader problem within the automotive industry, characterized by the algorithmized approach that over-exposes some vehicles and fails to target the vehicles in most need of exposure. This imbalance leads to marketing waste and unnecessary spend that results in slower turn than possible and more unneeded markdowns. Left unchecked, the situation compounds over time, as marketing budgets inflate without corresponding increases in sales or leads, leaving dealers to question the value of their efforts.

Mazda of Claremont's Dilemma

Leveraging VIN IQ's free marketing analysis, customized to his dealership, Ram sought to gain actionable insights into Mazda of Claremont's marketing performance. The analysis provided by VIN IQ highlighted the disproportionate allocation of resources, resulting in marketing waste and an inflated marketing budget without corresponding returns.

Vendor Issues

Marketing Waste

A majority of the paid traffic (55%) was allocated to the same handful of cars in the inventory. Two used vehicles, a Bentley and a Tesla, were drawing most of the paid traffic (29%). Significant traffic (6,551 clicks) was sent to an SRP or the homepage and resulted in zero viewed VDPs.

All case study data and outcomes are based on Mazda of Claremont's VIN IQ experiences from June 2023 to December 2023.
